

Angus Pointer — Senior Software Engineer

me@angus.buzz | github.com/alpoi | linkedin.com/in/alpoi | angus.buzz

Summary

Platform and backend engineer with a mathematics background, shipping production systems in Python, Go, C#, Java, and TypeScript. Progressed from test engineering to platform architecture in three years at a scaling startup, spanning Terraform migrations, high-throughput Go services, and LLM content pipelines.

Technical Skills

- **Languages:** Python, Go, C#, Java, TypeScript
- **Infrastructure:** Kubernetes (Helm, Flux), AWS, Terraform, CloudFormation, Docker
- **Architecture:** Microservices, event-driven systems, distributed workflows (Temporal), API design, schema design
- **Data:** MongoDB, DynamoDB, Elasticsearch, Redis, SQL/RDS
- **AI/ML:** LLM application development, RAG and vector search (Milvus)
- **Tooling:** CI/CD (GitHub Actions, AWS CodePipeline), automated testing, load testing
- **Observability:** Elastic APM, OpenTelemetry, Grafana, Prometheus, Loki

Experience

Consultant Engineer

Container Solutions

Jan 2026 — Present

Remote

- Developed a migration strategy from SVN to Git for a highly customisable logistics application with hundreds of clients, which is now being adopted.
- Led a team of 7 engineers to productionise an early-stage screening platform; fully typed Python services on Kubernetes, with full tracing and logging, now serving pilot customers.
- Designed and implemented a SQL schema combining 10+ related DynamoDB tables, allowing for advanced queries and relational integrity.

Software Engineer (Contract)

DataAnnotation

Jun 2025 — Jan 2026

Remote

- Created golden data for coding models over hundreds of scenarios, with a focus on correctness, readability, and maintainability.
- Evaluated performance of agentic coding tools, such as Cline and Windsurf, identifying improvements and regressions.

Senior Platform Engineer

Xapien

Dec 2024 — Jun 2025

London

- Designed and implemented CI/CD pipelines with GitHub Actions, with automated linting, formatting, testing, releases, builds, and deployment across multiple environments and tenants.
- Architected infrastructure for an entity resolution project, featuring 20+ distinct microservices in ECS, using Milvus for vector search.
- Developed a content pipeline for web scraping (Playwright, TypeScript), document conversion (Python, LLMs), and image processing (Go, libvips), optimised to produce LLM-friendly output.
- Founded and led the Code Standards Group, improving code clarity and review efficiency with industry-aligned style guides across 100+ repositories.
- Served as SME for Temporal, creating extension libraries and optimising production components.
- Implemented Elastic APM and OpenTelemetry logging, developing reusable libraries for ease of integration.

Systems and Infrastructure Engineer

Xapien

May 2023 — Dec 2024

London

- Streamlined deployments by migrating 10,000+ lines of legacy CloudFormation to modular, versioned Terraform.
- Deployed and maintained an NLP pipeline using optimised AMIs for GPU and Inferentia models, reducing spin up time from ~30 minutes to ~2 minutes, allowing scaling to zero.
- Enhanced Photon, an open-source address parsing service (Java), by migrating from integrated Elasticsearch to external cluster support, optimising read-only workloads peaking at 10,000 requests per second over a 2TB data set.
- Built a new IDAM system with AWS Cognito and RDS, migrating from Auth0, serving thousands of users.
- Rebuilt a high-performance cache access service, achieving over 1M TPM with a low-latency Go API.
- Configured OpsGenie and Incident.io alerting, leading and participating in on-call rotations to triage incidents.

Technical Test Engineer

Xapian

May 2022 — May 2023

London

- Automated regression testing using Python and React tools, more than halving QA testing time.
- Developed CRISPE (Customer Report Indicators Serving Priority Estimation) in C#, enabling Customer Success to effectively prioritise manual report reviews across 500+ daily reports.
- Built a Kibana dashboard for Sales and Customer Success, with automated event ingestion, displaying key user metrics.

Education

Mathematics MMath (1st Class)

University of Nottingham

Sep 2017 — Jun 2021

- Thesis title: An introduction to algebras and space time block coding.
